REQUESTS FOR DATA

In addition to the statistics and data appearing in this report, the Bureau has additional information available upon written request and will make every effort to comply with requests for data within its limitations of staff and resources.

Please direct all requests for data to:

Bureau of Vital Records/Health Statistics
Office of Information Services
Division of Public Health Services
Health and Human Services Building
6 Hazen Drive
Concord, New Hampshire 03301-6527
Toll-free number 1-800-852-3345

NOVEMBER, 1986

INTRODUCTION

This report is a statistical summary of vital events in New Hampshire for the calendar year of 1985. Data concerning births, deaths, marriages and divorces are presented. Interpretations of these data should take the following information into account.

Under-Registration of Events: While under-registration can occur, it can be considered a minimal problem in New Hampshire. The number of reports of events received too late for inclusion in annual summary statistics is not statistically significant when state-wide patterns are examined.

Geographic Allocation of Events: Geographic allocation is based on the reported residence or on the reported place of occurrence of an event. Every effort is made to be as accurate and as complete as possible in allocating an event. For births, infant deaths and fetal deaths, residence denotes the mother's usual residence. For deaths, the decedent's usual residence is used. For marriage and divorce, the data refer to New Hampshire occurrences only since there is no exchange of information for these events among states.

Comparability in Cause-of-Death Statistics: Two major factors affect the interpretation and comparability of cause-of-death statistics over time. They are changes in the scheme for classifying the causes and changes in diagnostic practices.

The classification scheme, the International Classification of Diseases (ICD), is modified approximately once every ten years to reflect changes in medical opinion and practices. The most recent revision, the ninth, was issued in 1978. Cause of death statistics in this 1985 report reflect the use of this ninth revision of the ICD.

To compare mortality statistics from one revision of the ICD to the next it is necessary to use "comparability ratios". Comparability ratios provide a measure of how much discontinuity exists in the mortality data resulting from the introduction of a new revision for the ICD. Such ratios are developed by comparing the number of deaths assigned to a cause, or group of causes in the previous revision to the number assigned in the next revision.

Underlying Cause of Death Data: Cause of death data have been classified using the automated system known as ACME (Automated Classification of Medical Entities). The system provides for computer assignment of the underlying cause of death in accordance with decision rules specified in a computer program. The rules are the same as those applied by nosologists in assigning underlying causes of death.

Nosologist application of the rules may sometimes contain error. ACME is said to eliminate this avenue of error since the exact same criteria are applied in every case in the machine process.

Population Estimates: State, county and city-town population estimates for New Hampshire appearing in tables and text have been provided by the New Hampshire Office of State Planning in cooperation with the U.S. Bureau of the Census However, age-specific and age-adjusted death rates featured in the mortality section are based on a different set of population by age estimates specially prepared for the Bureau of Vital Records and Health Statistics by the Office of Biometrics, University of New Hampshire.

Interpreting Rates: A number of points should be kept in mind when examining rates.

Rates based on small numbers of events usually exhibit considerable variation. Such variation substantially limits the usefulness of rates as estimators of the probability of the occurrence of an event and their utility in making comparisons.

Unadjusted rates are not reliable for drawing definitive conclusions when comparing different areas since they do not take into account various factors which may influence the rate such as age, sex and occupation. For example, one should not assume that a rate difference between two areas for cardiovascular disease is significant where no adjustment for the age distributions in these areas has been made, since cardiovascular mortality rises with advancing age.

Where a rate difference appears to be significant, extreme care should be exercised in attributing the difference to any particular factor or set of factors. There are many variables which can influence rates and establishing a valid interpretation of the reason(s) for a rate difference requires substantial data and exacting analysis.

NOTE: All 1985 U.S. rates appearing in this report are provisional.

Vital Events Summary 1985

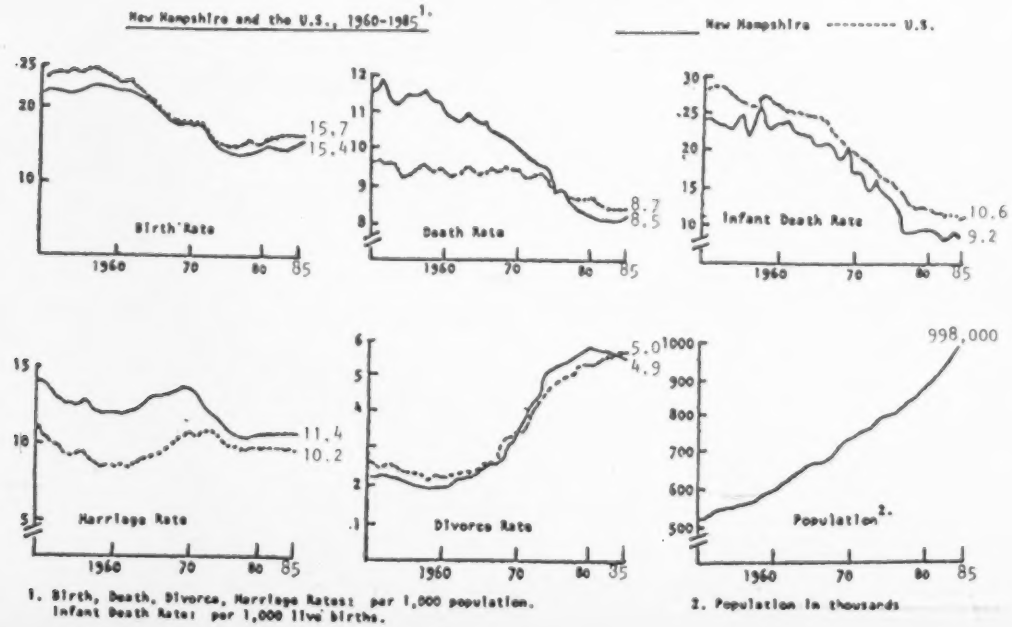
TABLE 1. SUMMARY VITAL STATISTICS, NEW HAMPSHIRE, 1985

EVENT	RESIDENT NUMBER[1]	RESIDENT RATE[2]	OCCURRENCE NUMBER	OCCURRENCE RATE[2]
Births	15,344	15.4 per 1000 pop.	15,308	14.4 per 1000 pop.
Deaths	8,449	8.5 per 1000 pop.	8,320	8.3 per 1000 pop.
Infant Deaths	141	9.2 per 1000 live births	111	7.2 per 1000 live births
Fetal Deaths	82	5.3 per 1000 live births & fetal Dths.	91	6.3 per 1000 live bths. & fetal dths.
Marriages[3]	--	--	11,351	11.4 per 1000 pop.
Divorces [3,4]	--	--	4,911	4.9 per 1000 pop.

Resident Natural Increase: 6,895
Resident Rate of Natural Increase: 6.9 per 1,000 population
1984 Estimate of State Population: 998,000 on July 1, 1985.

1. Residence for births, infant deaths and fetal deaths is usual residence of mother.
2. Rates calculated using Federal-State Cooperative population estimate of 998,000 for 1985.
3. Marriage and divorce information is for occurrences within New Hampshire only.
4. Divorces include legal separations and annulments.

TRENDS



1. Birth, Death, Divorce, Marriage Rates: per 1,000 population. Infant Death Rate: per 1,000 live births.
2. Population in thousands

TABLE 2. TWENTY YEAR VITAL EVENTS[1] SUMMARY: NUMBER AND RATES,[2] NEW HAMPSHIRE, 1970-1985

1. Live Births, Deaths, Infant Deaths, Neonatal Deaths, Fetal Deaths and Maternal Deaths are by residence. Marriages and divorces are by occurrence.
2. Birth, Death, Marriage and Divorce rates: per 1,000 population. Infant death, Neonatal death and Out-of-Wedlock birth rates: per 1,000 live births.
   Maternal death rate: per 10,000 live births. Fetal death rate: per 1,000 live births plus fetal deaths.
3. Population for 1970 and 1980 is the U.S. Census Bureau enumeration. All other population figures are estimates as of July 1, prepared by the state-federal cooperative program.

POPULATION

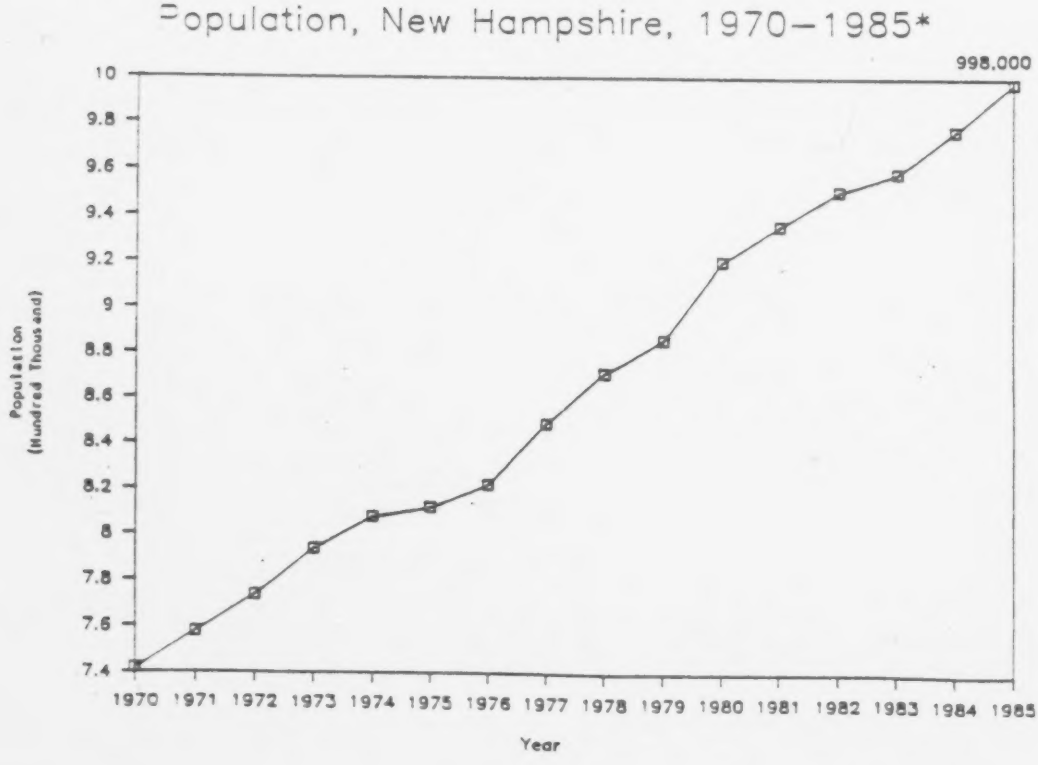
- POPULATION -

- The 1985 New Hampshire population was estimated to be 998,000 on July 1, 1985.* This estimate reflects additional population of 21,000 and represents a 2.1 percent increase since July 1, 1984.

- The amount of natural increase (the excess of births over deaths) was 6,895 in 1985 and the rate of natural increase in the population was 6.9 for every 1,000 persons.

- Of the total 1985 population increase of 21,000, 32.8 percent is attributed to natural increase while 67.2 percent is assigned to in-migration.

- In-migration continues to play the major role in population growth in New Hampshire although the percentage of growth attributed to in-migration is lower for the first half of the 80's (59.7 percent) than it was for the decade of the 70's (67.9 percent).



*Source of annual state population estimates: The N.H. Office of State Planning.

* Population estimates are provided by the N.H. Office of State Planning.

NATALITY

- NATALITY -

- For the second consecutive year the resident number and rate of births increased. The 1985 number of births reached a record high of 15,344 and the birth rate increased by 6.2 percent.

- The New Hampshire 1985 birth rate of 15.4 is 1.9 percent below the U.S. 1985 rate of 15.7. Not since the early '70's has the difference between the state and national birth rates been this small.

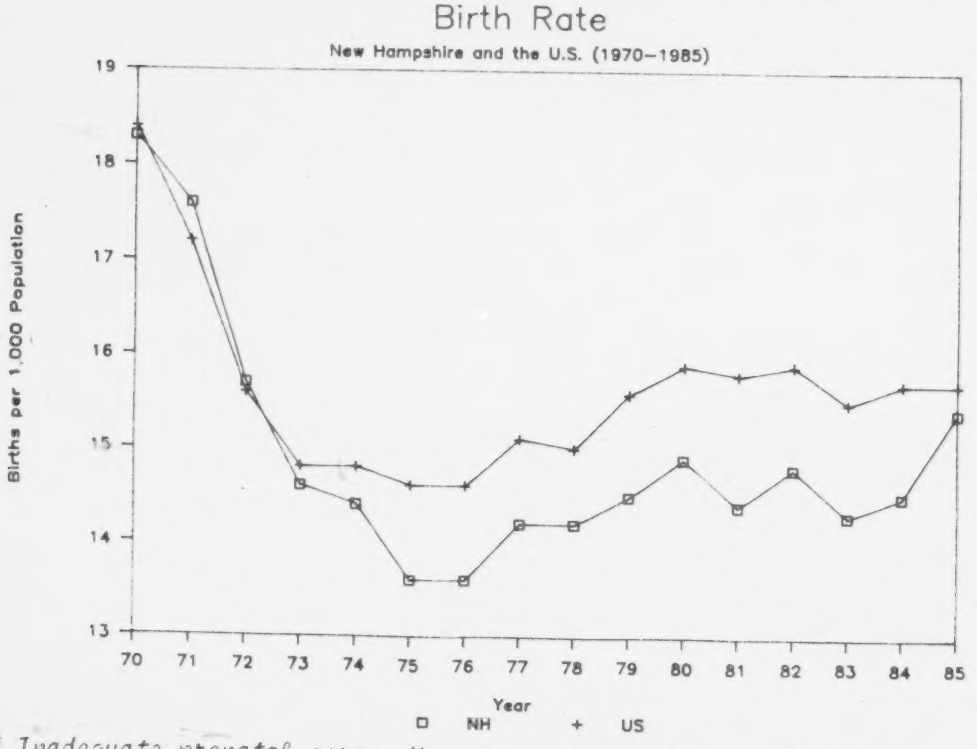
- The percentage of births reflecting the youngest maternal age group (under 20 years) continued to decline (8.2 percent in 1985) while the proportion of births indicating maternal age of 35 or more years increased for the fifth consecutive year (6.6 percent in 1985).

- Inadequate prenatal care was slightly more extensive among '85 births (2.3 percent) than in '84 (2.2 percent).* Since the late '70's, the percentage of births reflecting insufficient prenatal care has shown little variation and has ranged from 2.0 to 2.6 percent.

- The incidence of low birth weight among newborns decreased slightly from 4.9 percent in 1984 to 4.8 in 1985. Over the past ten years, the percentage of low birth weight infants has declined very slowly.

- The trend of increases in the level of maternal education continued. In 86.3 percent of 1985 births, mothers had 12 or more years of schooling in comparison with 86.1 percent in 1984. Five years prior (in 1976), the percentage of mothers with 12 or more years of education was 84.2.

- A 1985 increase in non-marital births maintained an upward trend that has been evident for many years. The percentage of these births rose from 12.6 percent of total births in 1984 to 13.3 percent in 1985.



* Inadequate prenatal care: No prenatal care or care that commenced in the third trimester.

MORTALITY

- MORTALITY -

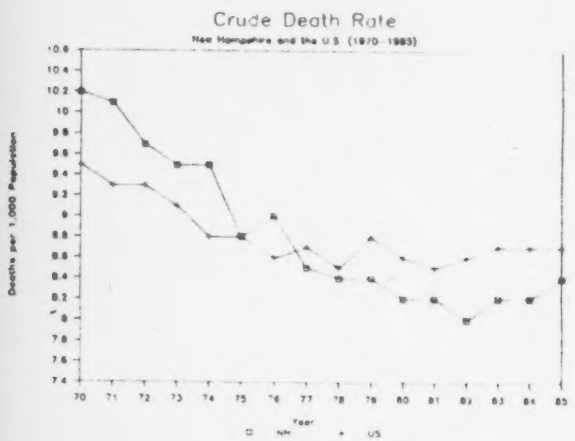
- The number of resident deaths which has been increasing since the late '70's, increased again in 1985, generally reflecting the continuing growth in the size of New Hampshire's population, particularly at ages 65 and over. The 1985 number of deaths, 8,449, is the highest of record. The crude death rate, after a period of stability from 1980 to 1984 rose by 3.7 percent, from 8.2 in 1984 to 8.5 deaths per 1,000 population in 1985.

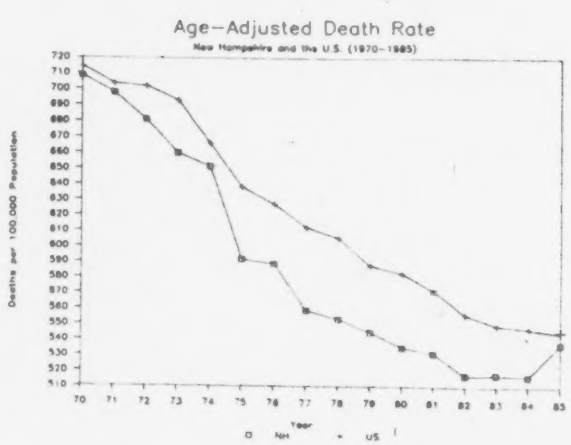
- The resident age-adjusted death rate (a better indicator of change in mortality risk over time than the crude rate) also rose by 3.7 percent, increasing from 516.8 to 535.7 deaths per 100,000 population.* This increase follows a leveling of the rate from '82 to '84 which was preceded by successive declines in the '70's. The New Hampshire age-adjusted death rate has been consistently lower than the comparable U.S. rate from 1970 to 1985. In 1985, the state rate was 1.9 percent lower than the 1985 national rate.

- The ten leading causes of New Hampshire resident deaths accounted for 84 percent of total deaths in 1985. These causes have been the same since 1977 but their rank order has varied. In 1985, chronic obstructive pulmonary disease displaced all accidents as the fourth most frequent cause of death while suicide became the eighth leading cause, moving ahead of atherosclerosis which dropped to the ninth rank.

- Compared to the previous year, 1985 state resident age-adjusted death rates increased for six of the ten leading causes, most notably Chronic obstructive pulmonary disease which increased by 27.6 percent. The other death rates reflecting 1985 increases were those for: Cancer, Cerebrovascular disease, All accidents, Pneumonia and influenza and Suicide. Three death rates declined, Diseases of the heart, Atherosclerosis and Chronic liver disease and cirrhosis. The Diabetes mellitus mortality rate did not change.

- In 1985, New Hampshire age-adjusted death rates were lower than comparable national rates for five of the ten leading causes: Diseases of the heart, Cerebrovascular disease, All accidents, Pneumonia and influenza and Chronic liver disease and cirrhosis. New Hampshire exceeded U.S. mortality levels for Cancer, Diabetes mellitus, Atherosclerosis, Suicide and Chronic obstructive pulmonary disease.





* Age-adjusted death rates control for changes in the age composition of a population.

1. Rates are per 100,000 population in the specified county. 2. Causes of death classified according to the ICD 9th Revision. 3. Age-adjusted rates are computed by the direct method. The standard population is the enumerated 1940 U.S. population. * Rate does not meet standard of reliability or precision (Base of measure less than 20 events). -- Because deaths from these causes occur primarily among infants, age-adjusted rates are not shown.

* *Numbers of deaths by cause for towns of population below 1,000 are not shown but are aggregated in "remainder of county" in accordance with confidentiality policy.*

- INFANT DEATHS -

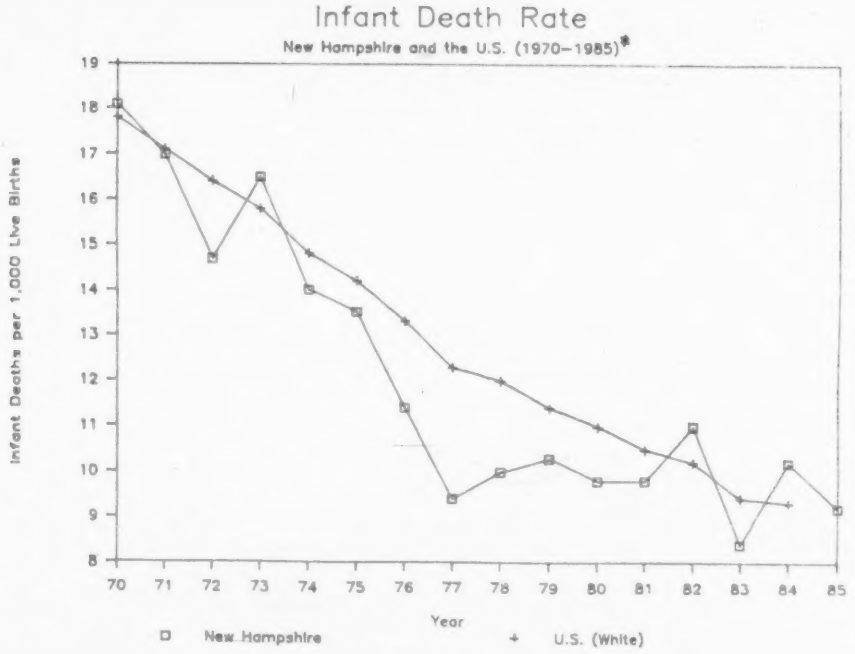
- Resident infant deaths totaled to 141 in 1985, four fewer than in 1984 and the infant death rate decreased by 9.8 percent, from 10.2 in 1984 to 9.2 per 1,000 live births in 1985. Although this rate dropped in 1985, consistent decrease has not characterized the rate in recent years. Since 1976, rate fluctuations have been greater than in prior years and the rate has not exhibited the pronounced decline observed in the '60's and earlier '70's.

- Resident neonatal mortality also decreased in 1985, from 7.2 to 6.2 neonatal deaths per 1,000 live births, a difference of 13.9 percent. Between 1970 and 1976 this rate declined markedly but then plateaued for the four years of 1977 to 1980. Similar to the total infant death rate, the neonatal death rate has not shown substantial decline from 1977 to the present.

- In 1984, the New Hampshire infant mortality rate of 10.2 was 9.7 percent above the U.S. white infant death rate of 9.4. However, throughout the '70's and into the '80's state resident infant mortality has generally been lower than U.S. white infant mortality.*

- The leading cause of infant death in New Hampshire in 1985 was Other conditions in the perinatal period which accounted for 43 of 141 deaths (30.5 percent). The next most frequent cause of mortality among newborns was Congenital anomalies, at a total of 40 deaths (28.4 percent).

- Among ten selected causes of infant death, the highest five-year (1981-1985) mortality rate for death in the neonatal period (under 28 days) is associated with the cause Other conditions in the perinatal period (289.6 deaths per 100,000 live births) while Sudden infant death syndrome (SIDS) is the major cause of mortality in the post-neonatal period (28 days to eleven months) at 115.8 deaths per 100,000 live births.



* U.S. 1985 white infant death rate is not available.

MARRIAGE and DIVORCE

- MARRIAGE AND DIVORCE -

Marriage

- The number of marriages performed in New Hampshire increased from 11,325 in 1984 to 11,351 in 1985. However, the marriage rate dropped from 11.6 to 11.4 per 1,000 population, after four consecutive years of increase from 1981 to 1984. Prior to these years of increase, the marriage rate had been in decline and had decreased by 26.5 percent from 1970 to 1980.

- New Hampshire's 1985 marriage rate of 11.4 is 11.8 percent above the national rate of 10.2. Except for a brief interval (1979 and 1980) the state number of marriages per 1,000 population has exceeded that of the U.S. since 1970.

Divorce

- Divorces granted in New Hampshire totaled to 4,911 in 1985, 31 fewer than in 1984 and the divorce rate declined from 5.1 to 4.9 per 1,000 persons in 1985. During the '70's, the state's divorce rate rose rapidly, reaching a peak 5.9 in 1979 and then decreased during the following four year period from '80 to '83.

- From 1971 to 1985, New Hampshire's divorce rate has been higher than the U.S. rate but the difference between the rates has been narrowing and in 1985 the state rate fell slightly below the national 1985 rate of 5.0.

- In 1985, the total number of New Hampshire divorces involving minor children was 2,883 and the number of minors was 5,056.

- Divorces with minor children that were subject to the court's award of physical custody of minors amounted to 2,737 (55.7 percent of all divorces) in 1985. In most of these cases (2,485 or 90.8 percent) the court's physical custody decision was not contested while the award was disputed in 252 (9.2 percent) instances.

- In 1985 cases where the court's physical custody award had not been contested, the mother of the minor children was the recipient of custody 82.3 percent of the time while the father was awarded custody in 9.3 percent of cases. In contested physical custody award cases, 76.1 percent of the awards were to the mother while fathers received custody in 11.9 percent of these cases.

3. TOTAL DIVORCES WITH MINORS THAT WERE OPEN TO CUSTODY AWARDS: 1983 - 2,778; 1984 - 2,806; 1985 - 2,737.

APPENDIX

- APPENDIX -

DEFINITIONS

Birth Weight	Weight of fetus or infant at time of delivery (normally recorded in pounds and ounces).
Deliveries	Live births and fetal deaths.
Early Neonatal Death (or Hebdomadal Death)	Death occurring to an individual less than seven days of age.
Fetal Death (reportable)	Death prior to the complete expulsion or extraction from the mother of a product of conception, having passed through at least the 20th week of gestation (the weight of which is 350 grams or more); the fetus shows no signs of life such as a beating heartbeat, pulsation of the umbilical cord, or definite movement of voluntary muscles.
Gestational Period	Number of weeks elapsed between the first day of the last menstrual period and date of delivery.
Out-of-Wedlock Birth	Birth record states mother "not married" on date of child's birth.
Infant Death	Death occurring to an individual less than 1 year of age.
Late Neonatal Death	Death occurring between 7 and 28 days after birth.
Live Birth	A live birth is a complete expulsion or extraction from its mother a product of conception, irrespective of the duration of pregnancy which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or a definite movement of voluntary muscles.
Live-Birth Order	Order number is equal to number of previous live births plus current birth.
Low Birth Weight	Birth wherein the birth weight is less than 2500 grams (approximately 5 lbs. 8 oz.).
Maternal Death	Those deaths wherein the physician has designated a maternal condition as the underlying cause of death.
Neonatal Death	Death occurring to an infant less than 28 days of age.
Occurrence	Place where event actually occurred regardless of residence.
Perinatal Death	Fetal Death or a death under one week of age.
Race	Race of mother, father, or decedent is as stated on certificate.
Residence	Usual place of residence for person to whom event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

- APPENDIX -

RATE FORMULAS

Age-Adjusted Death Rate	=	(Age Specific Death Rates/X/Proportion of standard population in Specific Age Group)
Age Specific Birth Rate	=	No.of Resident Live Births for a Specific Age of Mother / Tot. Female Population of Specific Age (Mid Year) X 1000
Age-Specific Death Rate	=	No. of Deaths in a Specific Age Group / Tot.Resident Population in Specific Age Group X 100,000
Crude Birth Rate	=	No. of Resident Live births / Total Resident Population (Mid Year) X 1,000
Crude Death Rate	=	No. of Resident Deaths / Total Resident Population (Mid Year) X 1,000
Divorce Rate	=	No. of Divorces, Annulments, Leg.Separations / Tot. Resident Population (Mid Year) X 1,000
Early Neonatal Death (or Hebdomadal Death) Rate	=	No. of Early Neonatal Deaths / Total Resident Live Births X 1,000
Fertility Rate	=	No. of Resident Live Births / Tot.Resident Female Population (15 44) X 1,000
Fetal Death Rate	=	No. of Resident Fetal Deaths / No.of Res.Live Births & Res.Fetal Deaths X 1,000
Out-of Wedlock Birth Rate	=	No. of Out of Wedlock Births / Total Resident Live Births X 1,000
Infant Death Rate	=	No. of Infant Deaths / Total Resident Live Births X 1,000
Low-weight Birth Rate	=	No. of Live Births (Less than 2500 grams) / Total Resident Live Births X 1,000
Marriage Rate	=	No. of Marriages / Tot.Resident Population (Mid Year) X 1,000
Maternal Death Rate	=	No. of Maternal Deaths / Total Resident Live Births X 10,000
Neonatal Death Rate	=	No. of Neonatal Deaths / Total Resident Live Births X 1,000
Perinatal Death Rate	=	No. of Perinatal Deaths / No. Res. Live Births + Res. Perinatal Deaths X 1,000
